

Overview:

Cantilever gates are ideal for large gate opening and areas where the ground is poor and unsuitable for a tracked gate option. The gate cantilever giving the appearance in the closed position of it levitating off the ground. The gate can come in a variety of styles, designs and finishes. Offers a simple secure solution to most entrances however does require a large runback area (where the gate sits when it's in the open position).

Material: Mild steel S275J0, Aluminium 1060Alloy

Finish: Zinc plated, hot dip galvanised, powder coated, shop blasted.

Infill options: wood planks, wood effect planks (steel/pvc), steel bars, mesh, louvered. Other bespoke options can be looked into at request.

additional safety equipment will need to be added if automation of the gate is required.

Overview

- Comes made to measure, or client's requirements up to 6m wide by 2m high, sizes above would require a structural design.
- British design and manufactured in the UK
- Fob access with automated gates
- Gates designed in line with current safety standard BS-EN13241-1:2003
- Very reliable system
- Shallow foundation pad required when installing the gate.
- Quick and easy install
